Why HPE Education Services?

- IDC MarketScape leader 5 years running for IT education and training*
- Recognized by IDC for leading with global coverage, unmatched technical expertise, and targeted education consulting services*
- Key partnerships with industry leaders OpenStack®, VMware®, Linux®, Microsoft®, ITIL, PMI, CSA, and SUSE
- Complete continuum of training delivery options—self-paced eLearning, custom education consulting, traditional classroom, video on-demand instruction, live virtual instructor-led with hands-on lab, dedicated onsite training
- Simplified purchase option with HPE Training Credits

This course includes instruction on advanced capabilities, including customization and management, the architecture of VMware vRealize®, and different ways of deploying vRealize® Operations™. The course explains certificates, capacity concepts, and workload optimization with real world use cases. The course also covers troubleshooting using dashboards and managing configurations. It further covers management packs such as those in the SDDC Management Health solution, VMware vRealize Service Discovery™ Management Pack, and VMware vRealize Orchestrator™. In general, this course explains how to use and configure most of the new features and enhancements in version 8.0.

Audience

Experienced system administrators, system integrators, and consultants responsible for designing, implementing, and customizing vRealize Operations

- Recognize how to use vRealize Operations components to build scalability and availability

Prerequisites

This class requires system administration experience with VMware vSphere® deployments or completion of one of the following courses:

- VMware vSphere: Install, Configure, Manage [V6.7]
- VMware vSphere: Optimize and Scale [V6.7]

Course objectives

By the end of the course, you should be able to meet the following objectives:

- Identify features and benefits of vRealize Operations
- Deploy vRealize Operations
- Use interface features to assess and troubleshoot operational issues

- Recognize effective ways to optimize performance, capacity, and cost in data centers
- Troubleshoot and manage issues and configurations using alerts and dashboards
- Use Telegraf to monitor operating systems and applications
- Create policies to meet the operational needs of your environment
- Create custom alert definitions, reports, and views
- Configure widgets for dashboards
- Configure super metrics
- Set up users and user groups for controlled access to your environment
- Extend the capabilities of vRealize Operations by adding management packs, solutions, and self-monitoring

*Realize Technology Value with Training, IDC Infographic 2037, Sponsored by HPE, October 2017

Detailed course outline

Course Introduction	<ul style="list-style-type: none"> • Introductions and course logistics 	<ul style="list-style-type: none"> • Course objectives
User Interface Enhancements	<ul style="list-style-type: none"> • Describe how to use vRealize Operations to manage the software-defined data center 	<ul style="list-style-type: none"> • Identify features and benefits of vRealize Operations
Deploying vRealize Operations	<ul style="list-style-type: none"> • Design and size a vRealize Operations cluster • Install a vRealize Operations cluster • Configure a vRealize Operations cluster for high availability 	<ul style="list-style-type: none"> • Describe different vRealize Operations deployment scenarios • Describe how to use vRealize Lifecycle Manager to deploy vRealize Operations
vRealize Operations Architecture and Certificates	<ul style="list-style-type: none"> • Describe the functions of the components in a vRealize Operations node • Identify the types of nodes and their roles in a vRealize Operations cluster • Recognize how a node's components interact to achieve scalability and availability 	<ul style="list-style-type: none"> • Identify ways that data is collected and analyzed by vRealize Operations • Describe vRealize Operations certificates
vRealize Operations Concepts and Policies	<ul style="list-style-type: none"> • Identify the tasks that can be performed in the administration and product user interfaces • Describe dashboards and their usage • Use tags to group objects 	<ul style="list-style-type: none"> • Create policies for various types of workloads • Explain how policy inheritance works
Performance Optimization	<ul style="list-style-type: none"> • Assess the performance of your environment to determine which data centers need optimization • Define the business and operational intents for a given data center 	<ul style="list-style-type: none"> • Automate the process of optimizing and balancing the workloads in data centers • Report on the results of optimization efforts
Capacity Optimization and Costing	<ul style="list-style-type: none"> • Define capacity planning terms • Understand capacity planning models • Assess the overall capacity of a data center and identify optimization recommendations 	<ul style="list-style-type: none"> • Recognize options for rightsizing VMs • Run what-if scenarios for adding workloads to a data center • Run what-if scenarios to plan the migration of workloads to the public cloud
Managing Configurations and Troubleshooting Pillars	<ul style="list-style-type: none"> • Recognize how to troubleshoot issues by monitoring alerts • Use step-by-step workflows to troubleshoot different vSphere objects 	<ul style="list-style-type: none"> • Assess your environment's compliance to standards • View the configurations of vSphere objects in your environment
Operating System and Application Monitoring	<ul style="list-style-type: none"> • Recognize how the Service Discovery manager and Telegraf fits into the vRealize Operations OS and app monitoring • Deploy the Application Remote Collector 	<ul style="list-style-type: none"> • Monitor the operating system and applications by using Telegraf
Custom Alert Definition	<ul style="list-style-type: none"> • Create symptom definitions • Create recommendations, actions, and notifications 	<ul style="list-style-type: none"> • Create alert definitions that monitor resource demand in hosts and VMs
Custom Views and Reports	<ul style="list-style-type: none"> • Build and use custom views in your environment 	<ul style="list-style-type: none"> • Create custom reports for presenting data about your environment

Custom Dashboards	<ul style="list-style-type: none"> • Create dashboards that use predefined and custom widgets • Configure widgets to interact with other widgets and other dashboards 	<ul style="list-style-type: none"> • Configure the Scoreboard widget to use a metric configuration file • Manage dashboards by grouping dashboards and sharing dashboards with users
Super Metric	<ul style="list-style-type: none"> • Recognize different types of super metrics • Create super metrics and associate them with objects 	<ul style="list-style-type: none"> • Enable super metrics in policies
User Access Control	<ul style="list-style-type: none"> • Recognize how users are authorized to access objects • Determine privilege priorities when a user has multiple privileges 	<ul style="list-style-type: none"> • Import users and user groups from an LDAP source
Extending and Managing a vRealize Operations Deployment	<ul style="list-style-type: none"> • Identify the management packs that are available to your environment • Install and configure a management pack • Monitor the health of a vRealize Operations cluster 	<ul style="list-style-type: none"> • Generate a support bundle • View vRealize Operations logs and audit reports • Perform vRealize Operations cluster management tasks
